

ABSTRACT.

A method of entering characters into a text string by means of a non-ambiguous word editor, includes that a user provides a key stroke by pressing one of a plurality of alpha-numeric keys for selecting a character group comprising a plurality of characters for entering a desired character included in this group. Then a character from said character group is displayed upon detection of the keystroke. The user is allowed to scroll through the character included in the character group for appointing the desired character. Finally the user selects the appointed character to be inserted into the entered text.
